```
import java.util. Scanner;
```

```
Public class SurfaceArea {
```

```
    Public static void main (String[] args) {
```

```
        Scanner input = new Scanner(System.in);
```

```
        // I decided to use a double to give the user  
        double edge;                                     More choice
```

```
        // Get user input
```

```
        System.out.print("Enter Edge Length: ");
```

```
        edge = reader.nextDouble();
```

```
        // Calculate the result
```

```
        double result = 6 * (edge * edge);
```

```
        System.out.println("The result is: " + result);
```

```
    }
```

```
}
```
